### Wallester AS Mar 2019 - Now

Senior UI/UX Designer, React Front-end developer

Wallester is a fintech company that tends to change banking business with innovation card issuing and management systems. They create an all-in-one solution for banks, credit institutions and fin-tech companies. Being the one and only designer and part of the front-end development team, I come up with UI, UX and Business analytics tasks for complex online banking systems as well as provide them with UI development for React single-page applications.

### eRenovate Oct 2018 - Mar 2019

UI/UX Designer, Team Lead GC Department

eRenovate is an online platform for renewal services in Canada. They connect specialists and homeowners to get renovations done. Their brand new GC Department is focused on unique service on the market — guaranteed contracts. I started GC project and had to face unique combinations in my practice — find the balanced solution among customers, professionals, business, legal and banking areas. Also, during the development phase, I mentored the development team as a project manager and designer.

### MaintControl Jan 2017 - Oct 2018

Senior UI/UX Designer, React Front-end developer

Maintcontrol is a company building task management software for the maintenance department of manufacturers and factories. This project was mostly about deep UX research. I conducted a series of interviews with various specialists in this area like planners, supervisors, engineers, and managers to create the right software design and develop an application that helps to manage heavy machinery maintenance processes.

### Datomia (Datacradle) Jun 2016 - May 2018

Senior UI/UX Designer, React Front-end developer

This is a well-known software development company specializes in private cloud management software. My work was focused on Web UI design applications for server cluster control, configuration, and cloud software with the extended file management system.

### FuzzFinders Aug 2015 - May 2016

Web UI/UX Designer

A social-based Internet project for pet owners. It unites technologies (geo-positioning and GPS tracking) and community to help people find their lost pets. I created the structure, made research and build optimal flow for various use case scenarios, made visual design for the platform and was a part of the marketing team.

### Cebrit Agency Mar 2014 - Nov 2015

Lead Web Designer

The local agency in Ukraine built websites and online shops for various groups of clients. Mostly I curated a theme-based e-commerce website development team, but I also took part in complex projects, working with other development teams.
